Universitat de València (Spain)

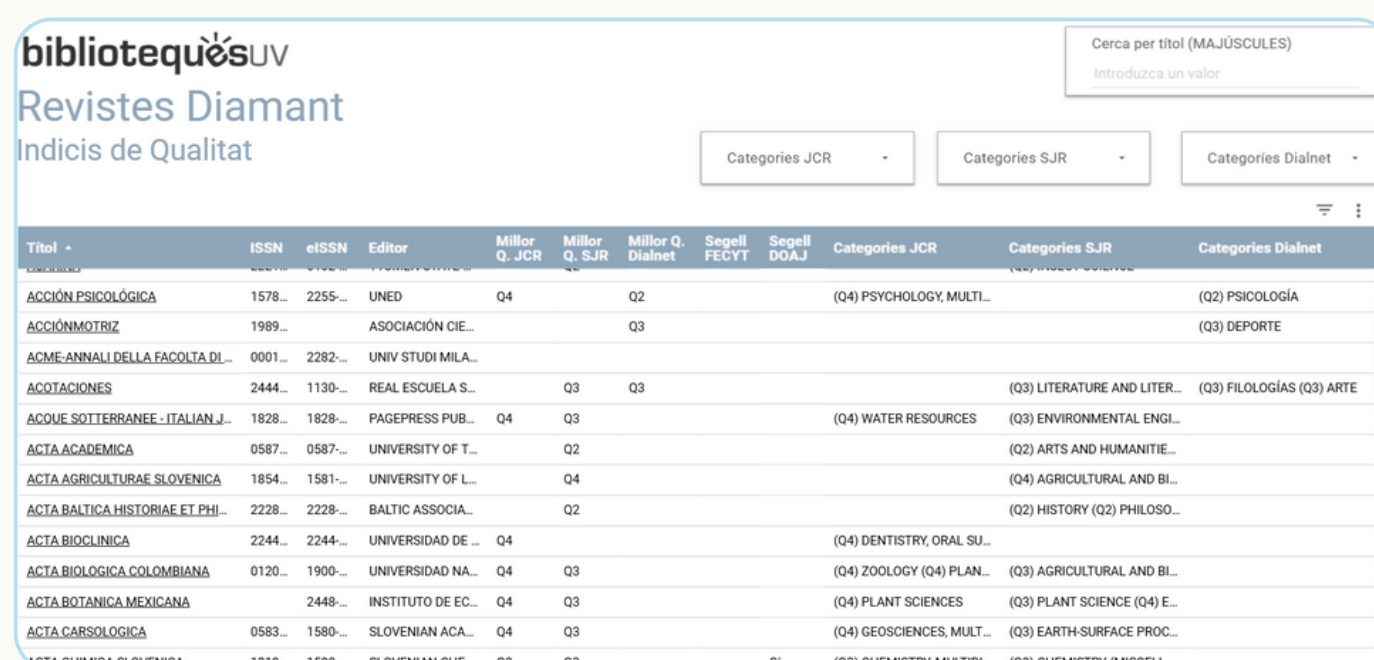

1 Introduction

The libraries of the Universitat de València have developed a tool that responds to two major issues in the diamond open access scenario: the **identification of high-quality diamond journals** by specialty and **their compliance with the evaluation criteria** established by research evaluation agencies, such as the spanish ANECA.

2 Methodology

3 Results

- **Open version**, accessible through the [UV website](#) and [Zenodo](#).
- **Restricted version**, which includes indicators that require an institutional license.

4 Impact & Conclusions

What are researchers interested in when submitting a paper? The tool helps them to select diamond journals that meet the quality criteria required for the evaluation of their research.

How does the Universitat de València contribute to the promotion of Diamond OA journals? By proposing them as a publishing alternative ahead of other options, as well as following and educating on the operational criteria established by DIAMAS.
